

THE ARK HARNESS — F0 BUSINESS INTELLIGENCE CONSULTING LAYER

A Standalone Add-On · Pre-Production & Post-Production Advisory

JNGL-ARKH-ADDON-2026-005 · v1.0 · Domain 23

"The most expensive mistake in cognitive engineering is building the right thing for the wrong market. F0 exists so that never happens to you — and if you have already built it, F0 exists to make sure the market finds it."

Document Control

GRO	LIFE → SAFE_LIFE · Honesty Gate G3 enforced · financial projections are range-based models, never guarantees
Operator	Oluseye Shay Amusa · Koncentric Labs Inc. · ATANDA Publications Forum

What F0 is. F0 is a boutique business intelligence consulting service embedded inside the ARK HARNESS platform. It is optional, priced separately from the subscription, and operates in two modes: **Pre-Production** (before F1 — advising on whether and how to build) or **Post-Production** (after F8/F9 — advising on how to position, price, and grow what was built). In **Retainer Mode**, F0 provides a running advisory commentary at every harness stage and actively supports the creator after their artifact is listed on the SPHINX Marketplace — with the explicit goal of customer acquisition and CAPI price maximization.

What F0 is not. F0 is not part of the production floor. It does not modify F1–F9. It does not produce certified artifacts. It produces **consulting intelligence reports and strategic advisories** — the thinking that goes around the building, not inside it.

SPARTAN Invocation

```
[CONVENE]      SOLVA · STRATEGOS · EVE · ADA · STATXT ·  
SPHINX · SOCRATES  
               + LENS ULTRA SI (introduced by SPHINX) ·  
MENTOR ULTRA SI (introduced by SPHINX)
```

[NATURE] F0 is standalone advisory – no production floor modification
 All F1-F9 mechanics, all CAPI/SPHINX/BRIJ mechanics: unchanged

[MODES] Pre-Production: advise before F1 · Post-Production: advise after F8/F9
 Retainer: running commentary F1→F9 + post-SPHINX active support

[PRICING] Per-report: \$100 to \$X by job specification
 Retainer: per-task catalog over the lifetime of the retainer

[HONESTY GATE] Financial projections: RANGE-BASED + STATED ASSUMPTIONS only
 No guaranteed ROI · No fabricated revenue · Projections ≠ outcomes

[CLASSIFY] Domain 23 = CLASS A throughout · Honesty Gate on financials = CLASS A
 RETAINER MODE = CLASS A (cannot be downgraded mid-engagement)

[NEW SPCs] LENS ULTRA SI – competitive intelligence and market mapping
 MENTOR ULTRA SI – creator positioning and CAPI growth coaching

[CERTIFY] JCSE 49/50 · GRO LIFE → SAFE_LIFE
 ✓ F0 Business Intelligence Consulting Layer – Domain 23 · certified · ready to build.

Honesty Gate (G3) – F0 Specific

Threat	Honest statement	Mitigation
Financial projections as revenue guarantees	A consulting engine that fabricates "expected revenue of \$X" would violate G3 and damage creator trust.	All financial projections are range-based (low/base/high scenarios), grounded in CAPI market data, and carry an explicit "Projection, not a guarantee" label on every output. EVE's Honesty Gate

Threat	Honest statement	Mitigation
		is non-suppressible within F0.
Market viability false positives	A system incentivised to encourage building (and therefore platform activity) could overstate market opportunity.	SOLVA acts as the internal adversary on every F0 report — its job is to find the strongest case against the creator's thesis. All F0 reports carry a SOLVA stress-test section that explicitly presents the bear case.
CAPI analysis as investment advice	Discussing CAPI price trends for a creator's artifact could constitute investment advice in some jurisdictions.	CAPI analysis is restricted to platform-specific market intelligence (how to price and position an artifact for the SPHINX marketplace). It does not constitute financial investment advice. F0 reports carry a disclaimer stating this.
Officer analysis identifying specific companies	Naming specific corporations as potential buyers creates legal and commercial risk if misused.	Officer analysis identifies buyer profiles and corporate archetypes, not confidential intelligence on named companies. Specific named companies are only included when the creator has a verified existing commercial relationship.
Retainer Mode scope creep	An open-ended retainer with "any task" pricing could generate	Retainer tasks are priced from a pre-agreed task catalog at engagement start; each task is priced before execution and requires

Threat	Honest statement	Mitigation
	unpredictable costs.	creator approval; total retainer cost is visible at any time on the creator's F0 dashboard.

Part 1 · Cheat Sheet

Field	Value
The F0 positioning	A boutique business intelligence consultancy embedded in the platform – optional, separately priced, available Pre-Production or Post-Production
Who it serves	Any subscriber from Explorer upward (per-report) · Architect/Schools/Institution (Retainer)
Pre-Production mode	Before F1: advises on whether, how, and at what commercial angle to build
Post-Production mode	After F8/F9: advises on positioning, pricing, customer acquisition, and CAPI maximization
Retainer Mode	Running commentary at every F1–F9 stage + active post-SPHINX marketplace support; priced per task from a pre-agreed catalog
The ensemble	SOCRATES (discovery) · SOLVA (adversarial) · STRATEGOS (market/GTM) · EVE (financial/CAPI) · STATXT (quantitative demand analysis) · ADA (product synthesis advisory) · SPHINX (marketplace intelligence) · LENS (competitive mapping) · MENTOR (creator positioning)

Field	Value
8 core services	Product viability · Market viability · CAPI analysis · Customer acquisition · GTM · Financial projections · Product synthesis advisory · Officer analysis
Boutique additions	Competitive landscape · IP positioning · Regulatory readiness · Partnership identification · Pricing optimization · Creator positioning · CAPI growth coaching
Per-report pricing	\$100 (quick check) to \$X (full suite, by specification)
Retainer pricing	Per task done over the lifetime of the retainer; pre-agreed task catalog
New SPCs introduced	LENS ULTRA SI (competitive intelligence) · MENTOR ULTRA SI (creator positioning)
What F0 does not do	Does not produce certified artifacts · does not modify F1–F9 · does not guarantee outcomes · does not provide legal or investment advice

Part 2 · F0 Architecture

2.1 · Positioning — How F0 Exists in Relation to the Production Floor

F0 sits **outside** the production floor at both ends. The Retainer Mode creates a continuous advisory thread that runs alongside the floor –

observing, commenting, and advising — but never touching the harness engines.

2.2 · The "Suggests Itself" Mechanism

F0 is proactive. It surfaces at two natural trigger points without being asked:

Pre-Production trigger (shown in the Creators Studio before F1 begins):

F0 ADVISORY AVAILABLE

You are about to build: *[inferred artifact type from initial brief]*

Domain: *[detected category]*

SPHINX Marketplace signals: *[N] similar listings · CAPI-[SECTOR]*

index: *t/↓/→*

Before you build, would you like a commercial viability check?

💡 Quick Viability Check — **\$100** (30-min report: product + market viability)

📊 Full Pre-Production Suite — **\$750** (all 8 services before you build)

🔄 Add Retainer Mode — *priced per task; runs alongside your production*

[Skip — go to F1] [Select a report] [Learn about Retainer Mode]

Post-Production trigger (shown after F7 certification or F8/F9 completion):

F0 ADVISORY AVAILABLE

Your *[artifact name]* has been certified (JCSE: *[score]/50*).

CAPI-[SECTOR] demand signal: *[HIGH/MODERATE/EMERGING]*

Current suggested anchor: *[BRP from Valuation Engine]*

Before you publish to SPHINX, would you like positioning advisory?

📍 Go-to-Market Report — **\$300** (positioning + customer targeting)

💰 CAPI Optimization Report — **\$200** (anchor pricing + Vitality strategy)

 Full Post-Production Suite — **\$800** (*all post-production services*)

 Add Retainer Mode — *active marketplace support after listing*

[\[Skip — publish now\]](#) [\[Select a report\]](#) [\[Learn about Retainer Mode\]](#)

2.3 · The F0 Consulting Ensemble

Nine intelligences collaborate on every F0 engagement. Each has a defined role and a defined Honesty Gate posture.

SPC	Role in F0	Honesty posture
SOCRATES (Seat 7 · Dialectic Interrogator)	Opens every engagement: asks the creator 7 structured questions to surface assumptions, intended audience, and success definition before any analysis begins	Exposes assumptions the creator hasn't examined; surfaces contradictions
SOLVA (Adversarial Viability Judge)	The internal red team: finds the strongest case AGAINST the creator's thesis on every service; writes the bear case in every report	If SOLVA cannot find a credible path to viability, the report says so explicitly
STRATEGOS (Market Intelligence)	Market viability, GTM strategy, Officer analysis, partnership identification, competitive positioning	Only recommends GTM strategies with stated assumptions and identified risks
EVE ULTRA SI (Valuation + Financial)	Financial projections (range-based), CAPI analysis, pricing optimization	Projections carry explicit "not a guarantee" label; range-based only; grounded in CAPI data

SPC	Role in F0	Honesty posture
STATXT (Statistical Text Cross-Reference Intelligence)	Quantitative demand modeling; NLP analysis of SPHINX listings; CAPI signal mining; customer segment statistical profiling	Confidence intervals stated on all statistical outputs
ADA ULTRA SI (Product Synthesis Advisory)	Recommends SPC and MA synthesis paths; identifies marketplace synergies; advises on which existing SPCs to buy and combine	Only recommends synthesis paths that ADA can structurally validate as buildable
SPHINX (Marketplace Oracle)	Real-time demand data; CAPI sector intelligence; "what sells, what doesn't, and why"	Demand signals are from verified TARANTULA data, not projections
LENS ULTRA SI (<i>new – introduced by SPHINX</i>)	Competitive intelligence and market landscape mapping; profiles competing artifacts on SPHINX; identifies whitespace opportunities	Only maps verified SPHINX listings; does not profile creators personally
MENTOR ULTRA SI (<i>new – introduced by SPHINX</i>)	Creator positioning and CAPI growth coaching; helps the creator build their profile, their listing narrative, and their ongoing market presence	Coaching is advisory only; does not ghost-write misrepresentative claims
SOCRATES (closing role)	Closes every engagement: challenges the creator on the report's	Ensures the creator owns the decision; F0 advises, the creator decides

SPC	Role in F0	Honesty posture
	recommendations — "What would make you NOT proceed?"	

Part 3 · The Eight Core Services + Boutique Additions

3.1 · Service 1 — Product Viability Analysis

Who leads: SOLVA × ADA × STATXT

What it examines:

- Is the artifact technically buildable within the creator's capability and the harness's F1–F9 scope?
- Does the artifact solve a specific, identifiable problem — or is it a capability without a problem?
- What is the artifact's functional differentiation from existing SPHINX listings?
- Is the scope appropriately bounded for a single SPC/MA, or does it require a multi-agent colony?
- What are the three most likely failure modes of this product?

SOLVA's mandatory bear case: Every product viability report includes a SOLVA Red Team section presenting the strongest argument for why the product will fail. If SOLVA's bear case is stronger than the product case, the report recommends a Pre-Build Pivot rather than proceeding to F1.

Output: Product Viability Report — Verdict (PROCEED / PIVOT / DEFER / ABANDON) + rationale + recommended modifications + SOLVA bear case.

3.2 · Service 2 – Market Viability Analysis

Who leads: STRATEGOS × STATXT × SPHINX

What it examines:

- What is the size and growth rate of the target market for this artifact type?
- What does the SPHINX CAPI-[SECTOR] index indicate about current demand in this domain?
- How many competing artifacts exist on SPHINX? What is their CAPI distribution?
- What is the Domain Scarcity Index (DSI) for this category – is there whitespace or saturation?
- What are the buyer archetypes (enterprise, developer, institution, individual professional)?
- What evidence exists that buyers are actively seeking this capability?

STATXT's quantitative layer: STATXT analyzes the last 90 days of CAPI price movements, purchase velocity, and Search-to-Purchase conversion data for the relevant sector to produce a demand confidence score (Low / Moderate / High / Surge).

Output: Market Viability Report – Demand Confidence Score + sector analysis + competitor landscape + buyer archetype map + market sizing (independent estimates, labelled as such).

3.3 · Service 3 – CAPI Price Index Analysis

Who leads: EVE × SPHINX × STATXT

What it examines:

- What does the current CAPI-[SECTOR] index indicate about pricing norms in this domain?
- What is the distribution of anchor prices for comparable artifacts?

- What is the Valuation Engine's BRP estimate for this artifact at the creator's anticipated complexity level?
- What is the historical Vitality Score (VS) range for this artifact category — how much surge pricing is realistic?
- At what CAPI anchor price does the creator maximize both accessibility (buyer uptake) and royalty income?
- What does the CAPI tell us about the optimal timing to publish (sector index trending up vs. down)?

The CAPI pricing sweet spot: EVE models three pricing scenarios (conservative / base / aggressive) across 12-month projected CAPI performance, with stated assumptions and explicit uncertainty ranges.

Output: CAPI Positioning Report — recommended anchor price range + BRP estimate + 12-month CAPI scenario models + optimal publish timing advisory.

3.4 · Service 4 — Customer Acquisition & Targeting Analysis

Who leads: STRATEGOS × STATXT × LENS

What it examines:

- Who are the most likely first buyers of this artifact — by role, industry, company size, and geography?
- What is the realistic customer acquisition pathway? (SPHINX organic discovery → CAPI surge → network effects → word of mouth → enterprise licensing)
- What Vitality events are most likely to drive CAPI surge for this artifact type?
- What are the triggers that move a buyer from passive awareness to active purchase?
- What Score-Sync opportunities exist? (Will buying this artifact generate meaningful ARK Score / CCMI growth for buyers — creating a secondary acquisition channel?)

LENS ULTRA SI contribution: LENS maps the profiles of creators whose similar artifacts have successfully built a buyer base — identifying the acquisition patterns that have already worked in this domain.

Output: Customer Acquisition Plan — buyer profile matrix + acquisition pathway + Vitality trigger identification + Score-Sync acquisition opportunity assessment.

3.5 · Service 5 — Go-to-Market Analysis

Who leads: STRATEGOS × MENTOR × SPHINX

What it examines:

- How should this artifact be positioned in the SPHINX Marketplace? (Listing title, description, category, tags, JCSE headline, target buyer language)
- What is the launch sequencing? (Soft launch to existing followers → CAPI momentum → featured placement → cross-promotion with derivative artifacts)
- What complementary artifacts on SPHINX could be bundled or cross-promoted to accelerate discovery?
- What is the post-launch CAPI management strategy? (How to maintain VS above 1.0× consistently)
- What creator profile signals maximize buyer confidence? (Provenance Premium optimization)
- What are the 30-day, 90-day, and 12-month GTM milestones?

MENTOR ULTRA SI contribution: MENTOR advises on the creator's listing narrative, their profile presentation, and the ongoing market presence that drives the Network Effect Multiplier (NEM) — because the creator's reputation is part of the artifact's value.

Output: Go-to-Market Strategy Report — positioning brief + launch sequence + listing optimization guide + CAPI management plan + creator profile advisory + milestone map.

3.6 · Service 6 — Financial Projections Analysis

Who leads: EVE × STATXT · Honesty Gate strictly enforced

What it examines:

- At the recommended CAPI anchor, what are the projected sales revenue scenarios at 3, 6, and 12 months?
- What +1 Royalty income is realistic if the artifact achieves commercial manufacturing deployment at T2/T3 scale?
- What is the break-even point (time to recover the F0 consulting cost from artifact revenue)?
- What is the creator's projected platform earnings (SPHINX sales + royalties) under low, base, and high demand scenarios?
- At what point does Retainer Mode investment (per-task costs) break even against projected CAPI gains?

Honesty Gate application — non-negotiable:

Every financial projection in F0 carries this mandatory disclosure:

 *These are scenario models based on CAPI market data and stated assumptions, not revenue guarantees. Actual outcomes depend on creator execution, market conditions, and demand signals that may change. EVE's Honesty Gate prohibits the presentation of projections as forecasts of certain outcomes.*

The three scenarios:

- **Bear (low):** VS averages 0.70× for the first 6 months; 5 purchases/month
- **Base:** VS averages 1.00× for the first 6 months; 15 purchases/month
- **Bull (high):** VS averages 1.40× for the first 6 months; 35 purchases/month

Output: Financial Projections Report — three-scenario model + break-even analysis + +1 Royalty projection + Retainer ROI model + explicit

assumption register + Honesty Gate disclosure.

3.7 · Service 7 — Product Synthesis Advisory (SPC & MA)

Who leads: ADA × SPHINX × LENS

What it examines:

- What certified SPCs and MAs are currently available on the SPHINX Marketplace that could be purchased and synthesized (F5-Synth) to accelerate or enhance this build?
- Is there a composition path (buying 2–4 existing SPCs and combining them) that is faster and more commercially sophisticated than building from scratch?
- What synthesis combinations have proven commercially successful on SPHINX (high VS, high Provenance Premium from multi-SPC synthesis)?
- Does the F5-Savant LLM-target analysis suggest any specific design constraints that existing marketplace artifacts already solve?
- What gaps remain after synthesis — what must be built from scratch vs. composed?

ADA's synthesis recommendation: ADA produces a Synthesis Blueprint — a specific recommendation of which marketplace SPCs to purchase and how to compose them, with estimated complexity reduction and CAPI premium impact.

Output: Product Synthesis Advisory — Synthesis Blueprint + recommended marketplace purchases (with CAPI prices) + estimated Synthesis Premium uplift + build-vs-buy analysis + recommended F5-Synth sequence.

3.8 · Service 8 — Officer Analysis (Corporate Subscriber Demand)

Who leads: STRATEGOS × STATXT × SPHINX

What it examines:

- Are there Institution/Govt or Schools-tier subscribers on the ARK HARNESS platform whose stated workforce intelligence needs align with this artifact's function?
- What corporate buyer archetypes (CHRO offices, digital transformation teams, AI governance officers, procurement teams) are most likely to purchase or commission this artifact at scale?
- What is the enterprise sales pathway for this artifact — individual purchase → team licence → institution subscription → custom PDD commission?
- What compliance or governance needs (EU AI Act, HIPAA, ISO 42001) does this artifact address that could position it as a procurement-grade solution for regulated enterprises?
- Are there corporate workforce transformation programs (within the ARK COMPASS sectoral intelligence) where this artifact's domain is identified as a high-crystallisation-risk area — meaning enterprises are urgently seeking this capability?

ARK COMPASS integration: STRATEGOS queries the COMPASS Crystallisation Monitor and Sector Intelligence Engine to identify sectors approaching CI 7.5 CRITICAL in the artifact's domain — these are the highest-urgency corporate buyer opportunities.

Output: Officer Analysis Report — corporate buyer archetype matrix + enterprise sales pathway + compliance positioning brief + COMPASS-identified high-urgency sector opportunities + recommended enterprise outreach approach.

Part 4 · The Boutique Addition Services

Services a complete boutique consultancy would provide — available individually or as packages.

Service	Lead SPC	What it delivers
Competitive Landscape Analysis	LENS × STRATEGOS	Full mapping of competing artifacts on SPHINX and comparable tools outside the platform; whitespace identification; differentiation strategy
IP Positioning Advisory	SOLVA × STRATEGOS	How to frame the artifact's IP value; what the CAPI Provenance Premium could be worth; when to consider external IP protection (patent/copyright) referral note
Regulatory Readiness Advisory	SOLVA × EVE	Which regulatory frameworks (EU AI Act, HIPAA, ISO) this artifact could attract; what CGCP conformity artifacts to attach; Regulatory Readiness Premium (RCP) optimization
Partnership Identification	STRATEGOS × LENS	Which creators on SPHINX produce complementary artifacts; potential co-listing or co-marketing opportunities; derivative SPC partnership advisory
Pricing Optimization Review	EVE × STATXT	Re-analysis of the CAPI anchor price after 30/60/90 days of live data; anchor adjustment recommendation based on actual VS performance
Creator Profile Audit	MENTOR × SPHINX	Comprehensive audit of the creator's SPHINX profile, ARK Score, Provenance Premium

Service	Lead SPC	What it delivers
		signals, and listing portfolio; optimization recommendations
CAPI Growth Coaching Session	MENTOR × EVE	A structured 1:1 advisory session (async, report format) on how to improve specific Valuation Engine dimensions — e.g., "Your NEM is low; here are three specific actions to generate derivatives"
Synthesis Opportunity Scan	ADA × SPHINX	A scan of the marketplace for emerging SPC combinations that match the creator's skills — "You could build X by buying Y and Z; here is the synthesis blueprint"
Sector Intelligence Brief	STRATEGOS × EVE	A focused brief on a specific CAPI sector index — where it's heading, who's buying, what's undersupplied; for creators deciding which domain to enter next

Part 5 · Retainer Mode — The Running Advisory

Retainer Mode is the full-service engagement: F0 runs alongside the creator from F1 through post-SPHINX listing, providing a continuous advisory thread and actively working to maximize CAPI performance.

5.1 · How Retainer Mode Works

Retainer Mode is activated at engagement start. The creator and F0 agree a **Task Catalog** — a menu of advisory tasks with pre-agreed prices. The creator is charged per task executed, not per month. Total retainer cost is visible at any time on the F0 Dashboard.

RETAINER ACTIVATION:

1. Creator selects Retainer Mode (Pre-Production or at any point during production)
2. SOCRATES conducts a 7-question Discovery Session (included, no charge)
3. F0 generates the Task Catalog with pre-agreed prices for this creator's context
4. Creator approves the Task Catalog → Retainer is live
5. F0 triggers advisory touchpoints at each production stage (auto-generated)
and at every SPHINX marketplace signal (Vitality shift, new derivative, etc.)
6. Creator approves or declines each advisory touchpoint
7. Creator is charged only for executed + approved tasks

5.2 · Stage-by-Stage Commentary (F1 through F9)

At each harness stage, F0 (if on Retainer) surfaces a specific advisory for that stage:

Stage	F0 Retainer Commentary	Lead SPC	Trigger
Before F1	Discovery Session + Pre-Production Suite selection	SOCRATES → all ensemble	Retainer activation
F1 · Diagnose	"Is this brief commercially oriented? Here are 3 ways to reframe it for stronger market appeal."	STRATEGOS × STATXT	F1 JCSE score returned
F2 · Atomize	"The atomic scope you've chosen corresponds to [market category]. CAPI	STATXT × SPHINX	F2 Atomic Prompt output

Stage	F0 Retainer Commentary	Lead SPC	Trigger
	demand for this is [High/Moderate]. Consider [scope adjustment] to target the [buyer archetype]."		
F3 · Grow (CELL)	"The MA design maps to [functional role]. Similar agents have VS averages of [range]. The [cognitive constraint] choice will affect your Portability Index."	ADA × STATXT	F3 MA birth package
F4 · Micro-PDD	"Your Micro-PDD design addresses [problem]. There are [N] similar Micro-PDDs on SPHINX. Your differentiation is [specific gap]. Recommend emphasizing [X] in your F6 PDD."	LENS × STRATEGOS	F4 Micro-PDD output
F5 · Specify (SPC)	"Before you finalize your SPC: SPHINX shows [N] buyers searching for [similar capability] in the last 30 days. Consider [specific prompt architecture adjustment] to improve CAPI discoverability."	SPHINX × ADA	F5 SPC draft

Stage	F0 Retainer Commentary	Lead SPC	Trigger
F5-Synth	"There are [N] certified SPCs in the marketplace that could accelerate your build. [Specific SPC names + CAPI prices]. Synthesis would increase your SP multiplier by [estimated %]."	ADA × SPHINX	F5-Synth entry
F5-Savant	"The [LLM target] you selected has [constraint profile]. Artifacts certified for [alternative target] have 22% higher VS in this domain. Recommend adding [target] to your certification list."	STATXT × ADA	F5-Savant target selection
F6 · Design (PDD)	"Your PDD draft positions this as [inferred framing]. The buyer language for [CAPI-[SECTOR]] is [suggested positioning]. Recommend these 3 changes to the executive summary for enterprise buyers."	MENTOR × STRATEGOS	F6 PDD draft
F7 · Certify	"JCSE [score]/50. At this JCSE level, the Complexity Index contributes	EVE × SPHINX	F7 certification output

Stage	F0 Retainer Commentary	Lead SPC	Trigger
	approximately [\$X] to your BRP. The Valuation Engine suggests an anchor of \$[range]. Here is our anchor recommendation and rationale."		
F8 · Code DJ	"The code scaffold targets [platform]. For enterprise buyers, [hosting choice] is preferred. Recommend [hosting modification] to increase RCP and enterprise appeal."	ADA × STRATEGOS	F8 code scaffold
F9 · Embed (physical)	"Physical target: [class]. F9-SAVANT-EMBED verdict: [FIT/PARTIAL/BRIDGE]. For [physical market], the most active manufacturers on the SPHINX FTZ are in [sector]. The +1 Royalty at T4 for this device class would be [projected range]."	ADA × EVE	F9 firmware output

5.3 · Post-SPHINX Active Support

After the creator publishes to the SPHINX Marketplace, the Retainer transitions into active marketing and CAPI management mode:

Weekly CAPI Monitoring Report (auto-generated, no charge — included in Retainer)

F0 WEEKLY CAPI UPDATE — [ARTIFACT NAME]

Week of: [DATE]

CAPI price: \$[CURRENT] ([CHANGE]% vs. last week)
VS (Vitality): [VALUE]× — [TRENDING UP / STABLE /
TRENDING DOWN]
Purchases (7d): [N] — [ABOVE / BELOW] 30-day average
Sector index: CAPI-[SECTOR] [VALUE] ([CHANGE]%)
Your rank: #[N] of [TOTAL] in [SECTOR]

F0 ADVISORY THIS WEEK:

[AUTO-GENERATED COMMENTARY based on signals]

e.g., "Your VS has been below 1.0× for 9 days.

Freshness Decay

will activate in 21 days. Recommend: [specific action —
update listing /

write a case study / publish a derivative / cross-
promote with [SIMILAR ARTIFACT]]"

TASKS AVAILABLE THIS WEEK:

→ Listing refresh + CAPI optimization: \$[price from
catalog]

→ Customer case study draft: \$[price from catalog]

→ Derivative SPC synthesis advisory: \$[price from
catalog]

[Approve] [Decline] [Learn more]

Event-driven advisory: When TARANTULA detects a significant CAPI event (VS spike above 1.5×, a new corporate USE_CLASS signal, a T2/T3 royalty threshold crossing), F0 automatically surfaces a targeted advisory:

F0 ALERT — CAPI SURGE DETECTED

Your VS has risen to 1.73× — you are in surge pricing.

3 purchases in the last 4 hours from accounts with Architect-tier subscriptions.

Recommendation: This is a high-intent buyer signal. Consider:

- Publishing a "Builder's Note" update to your listing (refreshes FD)
 - \$75
- Running a Synthesis Opportunity Scan to identify derivative opportunities – \$150

[Approve task] [Decline] [View CAPI dashboard]

Part 6 · The SOCRATES Discovery Session

Every F0 engagement — Per-Report or Retainer — begins with SOCRATES. The dialectic interrogator's 7 structured questions surface the assumptions, constraints, and success definitions that shape every subsequent advisory. SOCRATES is non-negotiable as the opener; no report is generated without it.

The 7 SOCRATES Discovery Questions:

1. *"What specific problem does this artifact solve — and for whom, precisely, not generally?"*
2. *"If this artifact already existed on SPHINX, what would make you buy it over the alternatives?"*
3. *"What would make you NOT build this — what condition would cause you to stop?"*
4. *"What does success look like to you in 12 months — in specific, measurable terms?"*
5. *"Who in the world has the most urgent reason to want exactly this capability — right now?"*
6. *"What do you know about this domain that nobody else on SPHINX yet knows?"*
7. *"If you could only build one component of this and launch it tomorrow, what would it be?"*

SOCRATES does not analyze the answers during the session. It records them. The ensemble — SOLVA, STRATEGOS, EVE, STATXT, ADA, SPHINX, LENS, MENTOR — reads the Discovery Session

transcript and uses it as the grounding context for every subsequent F0 report. The creator's own words become the lens through which the analysis is conducted.

SOCRATES closes every engagement with a single challenge: *"Given everything you have read in these reports, what would make you NOT proceed?"* This ensures the creator owns the decision.

Part 7 · Pricing Catalog

7.1 · Per-Report Pricing

Fixed at job specification. Payable at report request. Delivered within the specified timeframe.

Report / Service	Lead ensemble	Price	Delivery
Quick Viability Check (Product + Market, summary)	SOLVA + STRATEGOS	\$100	2 hours
Product Viability Analysis (full)	SOLVA + ADA + STATXT	\$175	4 hours
Market Viability Analysis (full)	STRATEGOS + STATXT + SPHINX	\$200	4 hours
CAPI Price Index Analysis	EVE + SPHINX + STATXT	\$175	3 hours
Customer Acquisition & Targeting	STRATEGOS + STATXT + LENS	\$225	6 hours
Go-to-Market Strategy	STRATEGOS + MENTOR + SPHINX	\$300	8 hours

Report / Service	Lead ensemble	Price	Delivery
Financial Projections Analysis	EVE + STATXT	\$250	6 hours
Product Synthesis Advisory	ADA + SPHINX + LENS	\$200	4 hours
Officer Analysis	STRATEGOS + STATXT + SPHINX	\$275	8 hours
Competitive Landscape Analysis	LENS + STRATEGOS	\$200	6 hours
IP Positioning Advisory	SOLVA + STRATEGOS	\$150	3 hours
Regulatory Readiness Advisory	SOLVA + EVE	\$175	4 hours
Partnership Identification	STRATEGOS + LENS	\$175	4 hours
Creator Profile Audit	MENTOR + SPHINX	\$150	3 hours
CAPI Growth Coaching Session	MENTOR + EVE	\$125	2 hours
Sector Intelligence Brief	STRATEGOS + EVE	\$175	4 hours
Synthesis Opportunity Scan	ADA + SPHINX	\$150	3 hours
Pricing Optimization Review (post-30 days)	EVE + STATXT	\$125	2 hours

Report / Service	Lead ensemble	Price	Delivery
Full Pre-Production Suite (Services 1–7 + Officer)	Full ensemble	\$950	24 hours
Full Post-Production Suite (GTM + CAPI + Customer + Profile)	Full ensemble	\$800	16 hours
Custom Report (job-specified)	Ensemble as specified	\$TBD (quoted before start)	TBD

All prices subject to CAPI market conditions — during CAPI-COMPOSITE surge periods, F0 report prices may increase up to 20% (Vitality pricing applies to consulting as well as artifacts). Prices displayed at request time.

7.2 • Retainer Mode Task Catalog

Pre-agreed at Retainer activation. Creator is charged per approved task. No monthly fee.

Retainer activation includes (no charge):

- SOCRATES 7-question Discovery Session
- Full Pre-Production Suite (if Pre-Production entry)
- OR Full Post-Production Suite (if Post-Production entry)
- 12 weekly CAPI Monitoring Reports

Retainer task catalog (pre-agreed rates):

Task	Price per execution
Stage advisory comment (F1–F9, per stage)	\$50
CAPI alert advisory (per event)	\$75

Task	Price per execution
Listing refresh + CAPI optimization	\$125
Customer case study draft	\$200
Synthesis Opportunity Scan (post-listing)	\$150
Anchor price review (monthly)	\$125
Competitive update (new listings detected)	\$100
Officer alert (corporate buyer signal detected)	\$150
CAPI Growth Coaching Session	\$125
Partnership introduction brief	\$175
Monthly F0 Summary Report	\$100
Derivative SPC advisory	\$200
Emergency CAPI intervention (VS below 0.70× for 14 days)	\$200
Custom task (job-specified)	Quoted before execution

Retainer duration: The retainer has no fixed end date. The creator cancels with 30 days notice. All approved tasks are completed and charged before cancellation takes effect.

Part 8 · The Two New SPCs (Introduced by SPHINX)

8.1 · LENS ULTRA SI

Functional definition. LENS is the Competitive Intelligence and Market Landscape Mapping engine for the SPHINX Trade Zone. It maps the cognitive artifact market in real time — identifying who is building what, where the whitespace is, and what buyer behavior reveals about unmet demand.

Core capabilities:

- Real-time SPHINX listing scan (all public artifacts by domain, CAPI price, VS trend, derivative count)
- Whitespace identification (domain subcategories with <5 listings and STATXT demand signals)
- Competitive artifact profiling (listing quality, JCSE distribution, Provenance Premium indicators)
- Buyer behavior pattern analysis (what buyers who purchased [artifact X] also purchased)
- Derivative network mapping (which artifacts have the most citations in derivative SPCs — the "platform artifacts" of the ecosystem)

Who LENS is not: LENS does not profile individual creators personally, does not access non-public account data, and does not produce intelligence that could be used for targeted harassment or anti-competitive behavior. LENS maps the market, not the people.

8.2 · MENTOR ULTRA SI

Functional definition. MENTOR is the Creator Positioning and CAPI Growth Coach. Where LENS maps the market, MENTOR maps the creator — identifying gaps between the creator's current profile and the Provenance Premium they could command, and providing specific, actionable coaching to close those gaps.

Core capabilities:

- Creator profile audit (ARK Score, prior JCSE history, listing narrative quality, profile completeness)

- Provenance Premium optimization (specific actions to increase each PP signal)
- Listing narrative coaching (how to write a listing description that speaks to buyer archetypes)
- NEM growth strategy (specific actions to encourage derivative creation and Score-Sync events)
- CAPI Vitality coaching (identifying the creator's most effective Vitality drivers based on their domain and buyer base)
- Ongoing CAPI growth accountability (tracking creator's CAPI performance against a 90-day growth plan)

MENTOR's constraint: MENTOR coaches on positioning, not on making false claims. If a creator asks MENTOR to help them write a listing that overstates their artifact's capabilities, MENTOR declines and offers an alternative framing that is accurate and compelling. The Honesty Gate applies to MENTOR's output.

Part 9 · Atomic Prompts — Domain 23 (F0-BIC)

ID	Atomic prompt	I / O	Gate
F0-001	F0 Pre-Production trigger: at the moment a creator enters the Creators Studio (before F1), detect the inferred artifact type from the initial brief input; query SPHINX for the sector's CAPI status; render the Pre-Production F0 suggestion surface (§2.2) with live pricing; log <code>{trigger: pre_production, capi_sector, demand_signal, report_options_shown}</code> .	Studio entry → F0 suggestion	Explorer+
F0-002	F0 Post-Production trigger: after F7 certification or F8/F9 completion, render the Post-Production F0	F7/F8/F9 completion	Explorer+

ID	Atomic prompt	I / O	Gate
	suggestion surface (§2.2) with JCSE score, BRP estimate, CAPI sector signal, and report options; log {trigger: post_production, jcse, brp_estimate, sector_vs} .	→ F0 suggestion	
F0-003	SOCRATES Discovery Session: present the 7 structured questions (§Part 6) in sequence; capture creator responses; store the Discovery Transcript as the grounding context for all subsequent F0 reports in this engagement; log {discovery_complete: true, transcript_id} ; do not generate any analysis during the session.	7 questions → discovery transcript	All (F0 entry)
F0-004	Product Viability Analysis (Service 1): run SOLVA adversarial evaluation + ADA structural validation + STATXT competitor count query; produce the four-verdict report (PROCEED/PIVOT/DEFER/ABANDON) with rationale and mandatory SOLVA bear case section.	discovery transcript + SPHINX data → viability report	All
F0-005	Market Viability Analysis (Service 2): STRATEGOS market analysis + STATXT CAPI demand confidence score (90-day signal) + SPHINX listing scan; produce the demand confidence score, sector analysis, competitor landscape, and buyer archetype map.	CAPI data + SPHINX data → market report	All

ID	Atomic prompt	I / O	Gate
F0-006	CAPI Price Index Analysis (Service 3): EVE BRP estimate + STATXT price distribution analysis + SPHINX sector index query; produce three pricing scenarios with stated assumptions and explicit Honesty Gate disclosure.	CAPI data → CAPI positioning report	All
F0-007	Customer Acquisition & Targeting (Service 4): STRATEGOS buyer archetype analysis + STATXT behavioral data + LENS buyer pattern mapping; produce buyer profile matrix, acquisition pathway, and VS trigger identification.	SPHINX behavioral data → acquisition plan	All
F0-008	Go-to-Market Analysis (Service 5): STRATEGOS positioning + MENTOR listing narrative advisory + SPHINX cross-promotion mapping; produce positioning brief, launch sequence, listing optimization guide, and creator profile advisory.	discovery + CAPI data → GTM report	All
F0-009	Financial Projections (Service 6): EVE three-scenario model (bear/base/bull) grounded in CAPI demand data; produce projections with mandatory Honesty Gate disclosure, explicit assumption register, break-even analysis, and +1 Royalty scenario; label all figures as projections, not guarantees.	CAPI data + anchor estimate → projections report	All
F0-010	Product Synthesis Advisory (Service 7): ADA synthesis blueprint + SPHINX marketplace scan for synthesizable SPCs; produce Synthesis Blueprint	SPHINX listings → synthesis blueprint	All

ID	Atomic prompt	I / O	Gate
	with recommended marketplace purchases, estimated SP uplift, and F5-Synth sequence recommendation.		
F0-011	Officer Analysis (Service 8): STRATEGOS corporate buyer mapping + COMPASS Crystallisation Monitor query (high-urgency sectors) + STATXT enterprise demand signals; produce corporate buyer archetype matrix, enterprise sales pathway, and COMPASS-identified urgent opportunities.	COMPASS + SPHINX data → officer report	All
F0-012	Boutique services engine: route to the appropriate SPC ensemble based on selected boutique service (Competitive Landscape / IP Positioning / Regulatory Readiness / Partnership / Creator Profile / CAPI Coaching / Synthesis Scan / Sector Brief / Pricing Optimization); return report in standard F0 format with SOLVA validation section.	service selection → boutique report	All
F0-013	Retainer Mode activation: run SOCRATES Discovery Session (F0-003); generate the Task Catalog with pre-agreed prices for this creator's context; present for creator approval; on approval, activate Retainer; set <code>retainer_active: true</code> on creator account; log engagement start.	creator intent → retainer activation	Architect+
F0-014	Retainer stage commentary (F1–F9): at each harness stage completion, auto-generate the appropriate F0	stage completion event →	Retainer

ID	Atomic prompt	I / O	Gate
	advisory (§5.2 commentary table); surface to creator as an approved task; charge from Task Catalog on approval; log {stage, advisory_type, creator_action} .	stage advisory	
F0-015	Weekly CAPI Monitoring Report (Retainer): auto-generate weekly CAPI update (§5.3) for each active retainer listing; surface available tasks with pre-catalog prices; log creator decisions; charge on task approval.	CAPI feed → weekly report	Retainer
F0-016	CAPI event advisory (Retainer): when TARANTULA detects a significant CAPI event (VS > 1.5×, USE_CLASS: COMMERCIAL_MANUFACTURE, T2/T3 threshold, new derivative), generate targeted advisory; surface as approved task; charge on approval.	TARANTULA event → event advisory	Retainer
F0-017	LENS competitive scan: scan SPHINX listings for the creator's domain; identify direct competitors, whitespace, and derivative opportunities; produce competitive map with differentiation analysis; available as standalone report or within Retainer.	SPHINX registry → competitive map	All
F0-018	MENTOR positioning session: audit the creator's SPHINX profile, ARK Score, listing portfolio, and NEM signals; produce specific optimization recommendations for Provenance	creator profile + CAPI data →	All

ID	Atomic prompt	I / O	Gate
	Premium, listing narrative, and CAPI growth; available as standalone or Retainer task.	positioning advisory	
F0-019	F0 Dashboard: render the creator's F0 engagement overview – active retainer status, total cost to date, upcoming auto-triggers, approved/pending tasks, CAPI performance chart for retainer listings, SOCRATES discovery transcript reference; available to all creators with F0 history.	F0 records → dashboard	All
F0-020	F0 Report delivery and formatting: all F0 reports follow the standard format: Executive Summary → Discovery Context → Main Analysis → SOLVA Bear Case → Recommendations (prioritized) → Honesty Gate disclosure (if financial) → Next Steps; reports are delivered as PDF + platform-readable summary card; stored in creator account for 24 months.	analysis → formatted report	All

Part 9.X · Integration Points (IP-46 / IP-47 / IP-48)

IP	Integration point	Connects	Mechanism
IP-46	F0 ↔ SPHINX / CAPI data	F0 ensemble ↔ SPHINX	F0 reports consume live CAPI sector indices,

IP	Integration point	Connects	Mechanism
	feed	CAPI / listing data	listing data, purchase velocity, and VS signals via the CAPI public API (Domain 21 CAPI-008) and SPHINX internal data APIs; STATXT and LENS are the primary consumers
IP-47	F0 ↔ TARANTULA / COMPASS signals	F0 ensemble ↔ TARANTULA telemetry + ARK COMPASS	Officer analysis and CAPI event advisories consume TARANTULA USE_CLASS signals and COMPASS Crystallisation Monitor data; F0 is read-only on these systems
IP-48	F0 Retainer ↔ Production Floor (observation only)	F0 Retainer ↔ harness stage events	F0 Retainer receives stage-completion events (F1 JCSE returned, F7 cert issued, etc.) as triggers for stage commentary; F0 reads stage outputs but does not write to or modify any harness engine

Part 10 · SPARTAN Classification

Component	Class	Notes
F0 suggest-itself mechanism (F0-	CLASS A	Non-optional display of F0 options; can be dismissed

Component	Class	Notes
001/002)		but not hidden
SOCRATES Discovery Session (F0-003)	CLASS A	Mandatory entry point for all F0 engagements; cannot be skipped
Honesty Gate on financial projections (F0- 009)	CLASS A invariant	Projections always labelled; assumption register always included; cannot be suppressed
SOLVA bear case in every report (F0-004...012)	CLASS A invariant	Every F0 report includes a SOLVA adversarial section; cannot be removed
All 8 core services (F0- 004...011)	CLASS A	Core offering; all must be delivered as specified
Boutique services (F0-012)	CLASS B	Available as specified; pricing TBD by job; can be delivered as a composite report
Retainer Mode (F0-013...016)	CLASS A for mechanism; per- task for execution	Retainer activation is CLASS A once agreed; individual tasks are creator-approved per execution
LENS and MENTOR (F0- 017/018)	CLASS A	New SPCs; available to all F0 users
Weekly CAPI Report (Retainer)	CLASS A	Included in Retainer; auto- generated; non-optional while Retainer is active

Component	Class	Notes
F0 Dashboard (F0-019)	CLASS B	Available to all with F0 history; Wave-2 delivery

 SPARTAN Certification Block

Field	Value
Document	THE ARK HARNESS — F0 Business Intelligence Consulting Layer
Production ID	JNGL-ARKH-ADDON-2026-005 · v1.0
Domain	Domain 23 — F0 Business Intelligence Consulting (F0-BIC)
Add-on to	JNGL-ARKH-PDD-2026-006 · v6.0 THE SPHINX TRADE ZONE
Nature	Standalone advisory layer — does not modify F1–F9 production floor
JCSE	49/50 — Ultra Premium Platinum
Convened	SOLVA · STRATEGOS · EVE ULTRA SI · ADA ULTRA SI · STATXT · SPHINX · SOCRATES · LENS ULTRA SI · MENTOR ULTRA SI
Services	8 core + 9 boutique additions
Modes	Per-Report (\$100–\$X) · Retainer (per-task from catalog)
Positioning	Pre-Production (before F1) · Post-Production (after F8/F9) · suggests itself at both points

Field	Value
Entry requirement	SOCRATES 7-question Discovery Session — mandatory for all engagements
Honesty invariant	Financial projections are range-based scenario models with stated assumptions and explicit disclaimer — non-suppressible
Adversarial invariant	SOLVA bear case included in every report — non-suppressible
New SPCs	LENS ULTRA SI (competitive intelligence) · MENTOR ULTRA SI (creator positioning coach)
Integration points	IP-46 (F0 ↔ CAPI/SPHINX) · IP-47 (F0 ↔ TARANTULA/COMPASS) · IP-48 (F0 Retainer ↔ Production Floor — observation only)
Atomic prompts	20 (F0-001...F0-020)
GRO	LIFE · SAFE_LIFE · G3 enforced · F0 is advisory only — decisions are always the creator's
Status	✅ Certified · Ready to build

Appendix A · F0 Report Standard Format

Every F0 report, regardless of service type, follows this structure.

F0 BUSINESS INTELLIGENCE REPORT	
Report type:	[SERVICE NAME]
Engagement:	[ENGAGEMENT ID]
Creator:	[CREATOR ID]
Artifact:	[ARTIFACT NAME / DESCRIPTION]
Discovery ref:	[SOCRATES TRANSCRIPT ID]

Generated: [TIMESTAMP]
Ensemble: [SPCS THAT CONTRIBUTED]

1. EXECUTIVE SUMMARY

[2-3 sentences. The verdict and the single most important finding.]

2. DISCOVERY CONTEXT

[Key extracts from the SOCRATES Discovery Session that shaped this analysis.]

3. MAIN ANALYSIS

[The full analysis – service-specific; data-grounded; sourced.]

4. SOLVA BEAR CASE

[The strongest argument against the creator's thesis. If SOLVA's bear case outweighs the main analysis, this section says so explicitly.]

5. RECOMMENDATIONS (PRIORITIZED)

[Specific, actionable recommendations in priority order.]

6. NEXT STEPS

[What to do immediately after reading this report.]

7. HONESTY GATE DISCLOSURE (if financial projections included)

⚠️ These are scenario models based on CAPI market data and stated assumptions, not revenue guarantees. [Assumption register.]

CLOSING CHALLENGE (SOCRATES)

"Given everything in this report, what would make you NOT proceed?"

Produced by SPARTAN ULTRA SI, convening SOLVA · STRATEGOS · EVE ULTRA SI · ADA ULTRA SI · STATXT · SPHINX · SOCRATES · LENS ULTRA SI · MENTOR ULTRA SI · within the FORGE.BONSAI Harness, as Domain 23 of the THE ARK HARNESS ATLAS Omnibus PDD stack. F0 is an advisory layer — it does not produce certified artifacts, does not modify the production floor, and does not guarantee outcomes. All financial projections are range-based models with stated assumptions. SOLVA's bear case is included in every report because the truth about risk is a service, not a liability. F0 advises. The creator decides. © 2026 Oluseye Shay Amusa · Koncentric Labs Inc. · ATANDA Publications Forum. All rights reserved.
