

The Reader's Onboarding Companion to the ATANDA Command Centre

Version 1.0 · May 2026

You have read — or are reading — how David Singh moved from a JST of 67.4 (eighteen months from obsolescence) to 91.3 (an irreplaceable architect). This companion is how **you** do the same. The book taught you the doctrine: the JST index, the Atomic Prompt 7-tuple, the FORGE pipeline, JCSE scoring, the BONSAI library. The **ATANDA Command Centre** is where that doctrine becomes a machine you operate.

- 1 Explains how to **get access** to the platform.
- 2 Explains the **subscriptions** — what each tier unlocks and what it costs.
- 3 Lays out the **Quest Badge ladder** — a chapter-by-chapter path, ordered from simplest to hardest, that takes you from "Know Your Number" all the way to "JST Ascendant."

PART 1 — GETTING ACCESS

```

ATANDA COMMAND CENTRE · READER ACCESS ■ ■ ■ ■ 1. Go to: [ ACCESS LINK – COMING
SOON ] ■ ■ ( placeholder: commandcentre.atanda ) ■ ■ ■ ■ 2. Reader code:
ATOMIC-PROMPT-BOOK-ONE ■ ■ (printed inside the back cover) ■ ■ ■ ■ 3. On first
run you will be greeted by the ■ ■ JST SELF-ASSESSMENT – this is Quest Badge 0. ■
■ ■ ■ [ ■ ■ ■ ■ PLACEHOLDER QR – scan to join the waitlist ■ ■ ■ ■ ] ■ ■ ■ ■ Until
launch, your reader code reserves: ■ ■ · your onboarding track (atomic_prompt_v1)
■ ■ · the free book Cartridge (ACME worked examples) ■ ■ · the book-cohort
discount on your first Architect ■ ■ month (see Part 2) ■

```

Page 1

requires the platform to be live to *understand* — but each Quest Badge is "claimed" the moment you can run the matching action.

PART 2 — SUBSCRIPTIONS: WHAT EACH TIER UNLOCKS

The platform meters the expensive part — the engine runs that call the model — by tier. The doctrine is free to learn; manufacturing at scale is what you subscribe for. Choose the tier that matches *how far up the badge ladder you intend to climb*.

Tier	Price	What it unlocks	Badge ceiling it supports
Explorer	Free	Run F1 (diagnose), fork from the BONSAI exemplar library, JST self-assessment	Badges 0–2
Practitioner	Paid monthly	Everything in Explorer + full F1–F5 daily for coursework / serious practice	Badges 0–5
Architect	\$199 / mo	Unlimited daily F1–F5, 2× F8 (Code DJ) runs per day , F6 / F6-VDJ / F7 / PFP	Badges 0–11 (the full solo ladder)
Team Lite (<i>per seat</i>)	Per-seat monthly	Architect-equivalent build power for each engineer, org-visible sessions	Solo ladder + Badge 12 (team)
Institution (<i>per seat</i>)	Per-seat monthly	Unlimited F8, org activity log, seat-based rollout across a whole team / programme	Full ladder at organisational scale

One-time add-ons (any tier)

Add-on	Price	What it does	Tied to badge
Cartridge	\$499.99 one-time	Locks authoritative context (your domain, brand, regulations) into every engine call in a session	Badge 3+ (and the free book Cartridge seeds Badge 2)

- **What you walk away with.** Your personal JST score and vulnerability band — the same instrument the book's transformation is measured against.
- **Unlocks** → Badge 1.

BADGE 1 — "MONSTER HUNTER"

Difficulty: ▲ (trivial) · **Anchored to:** Chapter 1, "The Monster We Built" · **Tier:** Explorer

- **The story beat.** Chapter 1 names the monster — the 6.47× displacement gap. Hunting it starts with *seeing* prompt quality objectively for the first time.
- **Do this (≈ 5 min).** Fork one exemplar from the **BONSAI library** and run **F1** (the diagnostic) on it. Read the JCSE score it returns.
- **Unlock condition.** One completed F1 run with a JCSE score displayed.
- **What you walk away with.** Your first JCSE-scored diagnostic — proof you can now measure prompt quality, not guess at it.
- **Unlocks** → Badge 2.

BADGE 2 — "ATOM SMITH"

Difficulty: ▲▲ (easy) · **Anchored to:** Chapter 2, "The Specification" · **Tier:** Explorer

- **The story beat.** Chapter 2 is the 7-tuple (I, O, C, T, M, V, Δ) — the moment a prompt stops being "ad-hoc text" and becomes an engineered artifact. The SSN bug failed because it had no Input Contract; you are about to write one.
- **Do this (≈ 10 min).** Run **F2** on a problem you actually own, producing your first **Atomic Prompt** with all seven tuple components. Use the free **book Cartridge** (ACME worked examples) so you start warm.
- **Unlock condition.** One F2 output with all 7 components present.
- **What you walk away with.** Your first production-grade Atomic Prompt — testable, versionable, reusable.
- **Unlocks** → Badge 3.

BADGE 3 — "FLOOR MANAGER" ★ conversion rung

Difficulty: ▲▲▲ (moderate) · **Anchored to:** Chapter 3, "The Production Floor" · **Tier:** Architect (\$199/mo — use your reader discount here)

- **The story beat.** Chapter 3 builds the factory: FORGE's seven phases, quality gates, the BONSAI cultivation layer. This is where craft becomes manufacturing — and where you stop being a tool user and become a line operator.
- **Do this (≈ 20 min).** Walk **F3** → **F4** → **F5**: grow the CELL micro-agent, convert to a Micro PDD, then produce a full 15-section SPC. Earn your **first certification tier** (SILVER or above).
- **Unlock condition.** One F5 SPC with a JCSE total $\geq 35/50$ (Near-Production or better) and a cert tier assigned.
- **What you walk away with.** Your first certified specification — the artifact that proves you can run the whole production line, not just one station. **This is the moment to convert to Architect.**
- **Unlocks** → Badge 4.

BADGE 4 — "PILLAR ARCHITECT"

****Difficulty:** ▲▲▲ (moderate) · **Anchored to:** Chapter 4 = *Context Craft* (companion) · **Tier:** Architect**

- **The story beat.** Chapter 4 of the Atomic Prompt curriculum is *Context Craft* — the seven pillars that decide what goes *inside* each tuple component. They are JCSE's entire "Context Engineering" dimension (20 of the 50 points).
- **Do this (≈ 20 min).** Work the seven pillars one at a time (SYSTEM, ROLE, INSTRUCTION, DATA, CONSTRAINT, FORMAT, EXAMPLE), re-running F1 after each, until your **Context Engineering sub-score climbs to ≥ 16/20**. (Open the *Context Craft* companion book for the deep dive on any pillar that lags.)
- **Unlock condition.** A diagnostic with Context Engineering ≥ 16/20.
- **What you walk away with.** Mastery of the input-quality layer — the difference between a prompt that works and one that survives an adversary.
- **Unlocks** → Badge 5.

BADGE 5 — "ATLAS BEARER"

Difficulty: ▲▲▲ (moderate) · **Anchored to:** FORGE Design/Documentation phase · **Tier:** Architect

- **The story beat.** A specification has to become something a stakeholder can read. The 4-Part ATLAS PDD is the human-facing architecture document — the spec carried into the boardroom.
- **Do this (≈ 15 min).** Run **F6** to draft a 4-Part ATLAS PDD from your certified SPC.
- **Unlock condition.** One complete 4-Part ATLAS PDD.
- **What you walk away with.** A board-ready architecture document generated from your own certified spec.
- **Unlocks** → Badge 6.

BADGE 6 — "TOOL DJ"

Difficulty: ▲▲ (easy) · **Anchored to:** FORGE Development-prep · **Tier:** Architect

- **The story beat.** Before you build, you choose how. The platform recommends the coding tool that best fits your spec.
- **Do this (≈ 5 min).** Run **F6-VDJ** to get a vibe-coding tool recommendation for your ATLAS PDD.
- **Unlock condition.** One F6-VDJ recommendation produced.
- **What you walk away with.** A matched build path — so you start development with the right instrument, not a default one.
- **Unlocks** → Badge 7.

BADGE 7 — "SPARTAN"

Difficulty: ▲▲▲▲ (hard) · **Anchored to:** FORGE Testing/Certification · **Tier:** Architect

- **The story beat.** "No self-certification." The book's hardest quality rule is that the person who built it cannot see its blind spots. SPARTAN certification is the independent, public proof.
- **Do this (≈ 20 min).** Run **F7** to compress your work into a **SPARTAN-certified MVP PDD** with a public **verify URL**.
- **Unlock condition.** One MVP PDD with a SPARTAN cert ID and a live verify URL.

- **What you walk away with.** A publicly auditable, certified artifact — the closest thing to a peer-reviewed badge that exists for a spec.
- **Unlocks** → Badge 8.

BADGE 8 — "CODE DJ"

Difficulty: ▲▲▲▲ (hard) · **Anchored to:** FORGE Deployment · **Tier:** Architect (2× / day)

- **The story beat.** The payoff the book promises: you are no longer a code writer. You direct the machine, and runnable code falls out of a certified spec.
- **Do this (≈ 20 min).** Run **F8 (Code DJ)** to scaffold a runnable codebase from your SPARTAN-certified MVP PDD.
- **Unlock condition.** One F8 scaffold produced.
- **What you walk away with.** A running scaffold built from your spec — the moment "architect, not implementer" becomes literally true.
- **Unlocks** → Badge 9.

BADGE 9 — "DRIFT GUARDIAN"

Difficulty: ▲▲▲▲ (hard) · **Anchored to:** FORGE Monitoring · **Tier:** Architect

- **The story beat.** Victor's failure was abandonment. The book's monitoring phase is the opposite — you stay responsible for what you built. Drift detection catches the spec silently rotting away from its code.
- **Do this (≈ 10 min).** Run the **PFP drift check** on your post-F8 artifact and resolve any findings until the check is clean.
- **Unlock condition.** A green PFP drift report.
- **What you walk away with.** Proof your spec and code still agree — responsible ownership, made measurable.
- **Unlocks** → Badge 10.

BADGE 10 — "BONSAI CULTIVATOR"

Difficulty: ▲▲▲▲ (hard) · **Anchored to:** Chapter 3, the BONSAI cultivation layer · **Tier:** Architect

- **The story beat.** "Most organizations build prompt libraries the way they build document repositories. Stuff goes in, never comes out." BONSAI is the opposite — living, curated, evolving. A cultivator graduates good work into the library and evolves it forward.
- **Do this (≈ 15 min).** Evolve one of your specs with the **DE-SPC evolution engine** and graduate your best certified artifact into your **BONSAI exemplar library**.
- **Unlock condition.** One evolved spec version + one artifact graduated to your library.
- **What you walk away with.** A living library entry — work that compounds instead of decaying.
- **Unlocks** → Badge 11.

BADGE 11 — "JST ASCENDANT" ★ the book's promise, fulfilled

Difficulty: ▲▲▲▲▲ (capstone) · **Anchored to:** the whole arc (David 67.4 → 91.3) · **Tier:** Architect

- **The story beat.** This is the entire point of *The Atomic Prompt*. David started at JST 67.4, eighteen months from obsolescence, and reached 91.3 — irreplaceable. Same person, same technology, different methodology. Now it is your number that moves.
- **Do this.** Re-take the **JST self-assessment** after completing badges 0–10. Having actually manufactured certified artifacts end-to-end, your Jobs / Skills / Talent inputs have changed.
- **Unlock condition.** Your JST crosses from your starting band into the **AI-Enhanced range (85+)** — or a documented, verifiable gain toward it.
- **What you walk away with.** A measured, shareable JST gain and the **"JST Ascendant" profile badge** — the platform's record that you made the transformation the book describes.
- **Unlocks** → Badge 12 (team) or graduation.

BADGE 12 — "HIVE BUILDER" (team capstone)

Difficulty: ▲▲▲▲▲ (capstone) · **Anchored to:** HIVE / Book Two foreshadow · **Tier:** Team Lite or Institution

- **The story beat.** "HIVE is what happens when you combine enough BONSAI-cultivated agents to get emergent intelligence." The book ends as one person; the platform's frontier is the team.
- **Do this.** Create an **organisation**, invite at least one teammate, purchase team seats, and run an **org-visible session** that appears in the shared activity log.
- **Unlock condition.** One org created, one teammate active, one org-visible certified session.
- **What you walk away with.** A team working the same factory — the on-ramp to the HIVE the next book describes.
- **Unlocks** → Graduation: you now run the full FORGE.BONSAI HARNESS at organisational scale.

THE LADDER AT A GLANCE

#	Badge	Difficulty	Chapter anchor	Engine action	Tier
0	Know Your Number	▲	Prologue	JST self-assessment	Explorer
1	Monster Hunter	▲	Ch 1	F1 diagnose	Explorer
2	Atom Smith	▲▲	Ch 2	F2 atomic prompt	Explorer
3	Floor Manager ★	▲▲▲	Ch 3	F3→F5, first cert	Architect
4	Pillar Architect	▲▲▲	Ch 4 (Context Craft)	F1 pillars → CE ≥16/20	Architect
5	Atlas Bearer	▲▲▲	FORGE design	F6 ATLAS PDD	Architect
6	Tool DJ	▲▲	FORGE dev-prep	F6-VDJ	Architect
7	SPARTAN	▲▲▲▲	FORGE testing	F7 + verify URL	Architect
8	Code DJ	▲▲▲▲	FORGE deploy	F8 scaffold	Architect

#	Badge	Difficulty	Chapter anchor	Engine action	Tier
9	Drift Guardian	▲▲▲▲	FORGE monitor	PFP clean	Architect
10	BONSAI Cultivator	▲▲▲▲	Ch 3 (BONSAI)	DE-SPC + graduate	Architect
11	JST Ascendant ★	▲▲▲▲▲	Whole arc	JST re-take, 85+	Architect
12	Hive Builder	▲▲▲▲▲	HIVE / Book Two	Org + team session	Team/Institution

★ = milestone rung. Badge 3 is the conversion moment (Explorer → Architect). Badge 11 is the book's central promise fulfilled.

HOW THE LADDER MAPS TO THE BOOK YOU JUST READ

- **Prologue** → **Badge 0**. The terror is the number; the platform makes it yours.
- **Chapters 1–2** → **Badges 1–2**. Free, on Explorer. The reader experiences diagnosis and the 7-tuple first-hand at zero cost — the widest possible top of funnel.
- **Chapter 3** → **Badges 3, 10**. The production floor and its cultivation layer. Badge 3 is where the book's "factory" becomes a subscription.
- **Chapter 4 (Context Craft companion)** → **Badge 4**. The deep dive on the seven pillars, exactly where it belongs in the curriculum.
- **The FORGE phases** → **Badges 5–9**. Design, build-prep, certification, deployment, monitoring — the back half of the pipeline the book foreshadows.
- **The whole arc** → **Badge 11**. David's 67.4 → 91.3, now measured on you.
- **HIVE / Book Two** → **Badge 12**. The team frontier the next manuscript opens.

A reader who climbs all twelve has not studied the transformation. They have shipped it — with a profile full of verifiable artifacts and a JST score that proves it.

Generated against ATANDA Command Centre platform state, May 2026. Platform is pre-launch; all access links and QR codes are placeholders pending the public host. Tier prices and add-on prices reflect current SKUs (Architect \$199/mo; Cartridge and Ingestion \$499.99 one-time each; Team Lite and Institution billed per seat).
